

The association “**Aecivitas team**” organizes and participates in sports competitions and recreational and cultural events. It promote studies and research to technical and performance enhancement of the vehicles fueled by alternative energies. It develops and builds the vehicles for motors shows with zero emission to preserve health and environment.

GOALS

Aecivitas team is looking for partners and sponsors, public and private, to build vehicles and to make new projects and participate in events like the “World Championship FIA Alternative Energies CUP” (see: www.fia.com).

Another goal is Italian organization or take part in competitions with “solar” means like the World Solar Challenge

BACKGROUND

Our activity is started in may 2006 thanks to a new Fiat Panda Electric, equipped with zebra batteries. This vehicle, with its excellent features, led us to a best win in April 2007, thanks also to our sponsor Mathema srl.

Cater Meeting 2007

At invitation of Senigallia (An) local government, and in collaboration with Caterpillar broadcast show (radiatorai2), we participated, during cater meeting, with a red “riscio elettrico”, at “solar rally” day, June 17th 2007.

Energy fair 2007. At invitation of the provincial administration of Firenze, the event organizer, we exhibited electric vehicles, available for test drive, and illustrated our activity at the “Energy Fair” at the “Medici park of Villa Pratolino”.

Terrafutura 2007. Thanks to our sponsor Mathema srl, the Ecolori spa company and the Fiat Brandini spa auto dealer, we presented some electric vehicles at this international fair (among them, the electric Panda which won first place in the energy consumption race of 27 April, described below). It was also possible to try a free-style motorcycle...electric, of course.

I° Green Rally of “Colli Euganei (PD)”.

In April 2007 we participated in this race, valid for the FIA CUP 2007, winning the first prizes in two categories in energy consumption and an honorable 10th place in the regularity race. The race took place within a park, on a course of 100 Km in a natural ambience within mid-evil cities and was covered live by SkyChannel and many other media. (see: www.aecivitas.com/news/070428-ColliEuganei/070427ColliEuganei.php)

Fiorano Circuit - Maranello

The regularity and energy consumption competition was valid for the FIA 2006 championship and we won 3 trophies, 3rd and 4th place, a very satisfying result for our first competition.

Crossing the Apennines

In mid-July 2006 to reach Maranello we decided to leave from Firenze and make a stop in Serramazzoni (MO). The trip was 132 Km, without refuelling and crossing three Apennines mountain passes. (see: www.aecivitas.com/news/060715-Fiorano/060715Fiorano.php)

At our arrival, we were greeted by the mayor in person.

From Firenze to Siena non-stop in an electric Fiat Panda with an administrator of Tuscany region. This was our first important challenge: the trip of about 70 Km was done at 90 km/h, the highest permitted speed on that road, like a “traditional” car to demonstrate that the electric vehicles can have the same performance as ICE vehicles. The start was covered on national television by RAI3 and the news was published by many press agent, ANSA included. (see: www.aecivitas.com/news/060711-FISI/060711FISI.php)
